Sergio Jiménez Cubas

Junior AI Developer

Madrid, Spain

GitHub: serjim06 | LinkedIn: sergio-jimenez-cubas | E-mail: sergiojimenezcubas@gmail.com | Phone Number: +34 684 30 38 19

Summary

Computer Engineering graduate from UCM, with a strong interest in AI, focusing on Computer Vision, Natural Language Processing and Evolutionary Programming and their applications. Experienced in developing end-to-end software, custom RAG platforms and MCP architecture for real-world AI development. Interested in applying AI techniques to real-world problems and further specializing in the field.

Work Experience

Intern - Esferize Comunicaciones SL Feb 2026 - Aug 2026

- Developed a mobile application using React Native and Expo SDK, along with a backend system using Python and FastAPI.
- Integrated Azure OpenAI and Azure Speech services to enable AI-driven features such as speech-to-text and automated technical report generation.
- Designed and implemented an MCP server to support natural language querying over a database.
- Developed a Microsoft Teams application that leverages AI to provide real-time transcription and automatically generate meeting minutes.
- Built a self-hosted RAG platform with incremental sync that unifies internal technical knowledge from wikis, ticketing, GitLab and Sharepoint into a hybrid-search MCP server for AI-assisted, source-cited Q&A.

Ahorramas - Supermarket Cashier Nov 2023 - Mar 2024

- Customer service, cash handling and inventory restocking.

Projects

Bachelor's degree final project: Federated Learning (9.5/10) GitHub

Development of a Python-based simulation environment for testing and research in federated learning, focused on building a framework for distributed training experiments and performance analysis using Flower and PyTorch.

Ticket Viewer — End-to-End Receipt OCR System (in progress) GitHub

Developing an end-to-end OCR pipeline for receipts in PyTorch, including CRNN+CTC word recognition; U-Net text detection and structured-data extraction.

ImageGen: Image Generation using Evolutionary Algorithms GitHub

An image generator that creates genre-specific images using evolutionary algorithms and a trained CNN for fitness evaluation.

Education

October 2026 - June 2027	Master's Degree in Artificial Intelligence at **Universidad Europea**
September 2022 - Jul 2026	Computer Engineering at **Complutense University of Madrid** (7.87/10)
Relevant Coursework:	Artificial Intelligence, Operating Systems, Software Engineering, Algorithms, Data Structures and Complexity, Concurrent Programming, Computer Architecture, Declarative Programming (Functional and Logical Programming).

Skills

Programming:	Python, C++, Java, C, SQL, Haskell
Frameworks:	PyTorch, Flower (Federated Learning), FastAPI, React Native, FastMCP (MCP Server)
Technologies:	MySQL, Git, Microsoft Azure, Azure OpenAI Service, Azure Speech Services
Languages:	Spanish (native), English (B2)
